Make your studio smarter with

Smart Control
Broadcast connected.
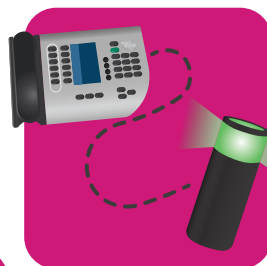

'If This Than That' for broadcast

SmartControl makes it possible to set up communication between devices in your studio.
Various protocols in your network are linked based on the 'If This Than That' principle.

SmartLed

Combine SmartControl with SmartLed. In SmartControl you can link triggers from your studio to parts of the SmartLed led strip

Pairing devices

Which devices are paired by SmartControl is up to you. SmartControl supports devices from for example Telos, Axia, DHD and Philips Hue. Triple Audio products like SmartLed and Cronoflex are also available in SmartControl.

And... we keep expanding the protocols and products you can address in SmartControl.
What would you like to connect?

Routines

A routine is easily made. Via the SmartControl interface you can quickly link a 'fader up' trigger to a 'lamp red' action or a 'phone rings' trigger to a 'lamp blink' action.
